

You have the Power to prevent injury!

PLAYSAFE

Dentist Fitted Multi-Laminated Mouthguards

IF YOU OR YOUR FAMILY ARE ACTIVE IN SPORTS, WE HAVE GOOD NEWS FOR YOU!

Over 5 million teeth will be knocked out at sporting events this year alone¹. Don't let it happen to you or your loved ones.

This serious trauma was caused by an elbow blow. It could have been avoided if the basketball player had been wearing a PLAYS SAFE mouthguard.

Everyone can benefit from the new PLAYS SAFE custom fitted mouthguards. From the littlest boys and girls on soccer teams all the way up to professional athletes, there's no reason anyone should put their teeth at risk. Play hard, but PLAYS SAFE.

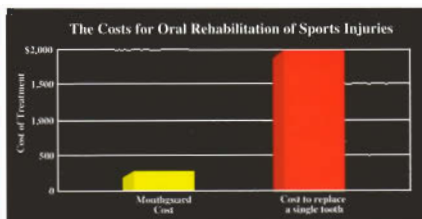

THE COST OF SPORTS RELATED ORAL INJURIES...

According to experts in preventive sports medicine, lifetime dental rehabilitation costs can approach many thousands of dollars for each tooth lost in a sporting injury! And this doesn't include the associated costs of hours in the dental office and possible secondary problems such as periodontal (gum) disease². *The total rehabilitation costs for a single knocked-out tooth are more than 20 times the cost for a custom laminated, professional grade mouthguard.*

Prevention Of Oral Injuries Can Save You Thousands!

Compared to oral rehabilitation costs (not including pain & suffering), a mouthguard is relatively inexpensive.

NOT ALL MOUTHGUARDS ARE CREATED EQUAL

Both stock and boil and bite mouthguards are typically found in sporting goods stores and neither fits as accurately as custom fabricated types. They often go unworn because they're uncomfortable and frequently interfere with breathing or speaking. Custom fabricated mouthguards have been shown to be far more effective than those offered in sporting goods stores^{2,3,4}.

A CUSTOM FIT ENSURES PROTECTION

PLAYSAFE

Boil and bite

JUNIOR: 1 layer of EVA material with added incisal and occlusal protection and a thickness of 3mm. Designed specifically for children with mixed dentition. (Only available in bright yellow, bright red, light blue, green, black or ivory).

LIGHT: 2 layers of laminated EVA material with a thickness of 3 mm. Designed for wrestling, volleyball, mountain biking, and motocross. (Only available in bright yellow, bright red, light blue, green, clear).

MEDIUM: 2 layers of laminated EVA material with a thickness of 5 mm. Specially fabricated for soccer, rugby, basketball, softball, rollerblading, skating and skateboarding.

FIVE TYPES OF PLAYSAFE MOUTHGUARDS⁴

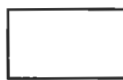

HEAVY: 2 layers of laminated EVA material with a thickness of 5 mm and 3 unique power dispersion bands. Specially designed for baseball, football, racquetball, martial arts and boxing.

HEAVY PRO: 3 layers of laminated EVA material (one hardened layer) with a thickness of 5 mm. Custom fabricated for ice, field and street hockey, as well as kickboxing and other heavy contact sports where blows from pointed objects are expected.
